DETAILED ACTION

- 1. This action is in response to the amendment filed 7/9/2007.
- 2. Claims 21-29 have been examined and are pending in the application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 21-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itoh U.S Patent No. 7,024,486 in view of Lo U.S Patent No. 5,911,044 and Rothschild U.S Patent No. 6,678,703.

As to claim 21, Itoh teaches a method of scanning a document at an input scanner and recording image data derived from the document at a selected destination computer among a population of destination computers (...an image data signals readout by a scanner device is directly transmitted to a terminal, connected to a network without using a sever device such as a mail server, an IP address is designated as a transmitting destination. A plurality of terminals connected to the same network by the IP address can be independently identified. Thereby, the readout image date signal can be directly transmitted from the network scanner device..., lines 25-35 column 3), comprising:

Application/Control Number: 09/943,397

Art Unit: 2194

entering, at a user interface associated with the input scanner, a destination of a document scanned at the input scanner, the destination including a reference to a predetermined file location retained in the destination computer (the operation portion 1 has a display where the user inputs the IP address as the transmitting destination);

and image data moving from the input scanner directly to the destination computer (...an image data signals readout by a scanner device is directly transmitted to a terminal, connected to a network without using a sever device such as a mail server..., lines 25-35 column 3).

Itoh does not explicitly teach sending data to a destination port of the destination computer, and polling the file location.

Lo teaches a system of scanning image wherein the image is also being sent from the scanner to a destination port (image being sent to port 108 of client 102, Fig. 3) of the destination computer (...a network scanning system which allows an application program running on a client computer to control and receive information from an image scanner over a computer network, in a manner which is similar to having the scanner directly connected to the client computer..., lines 11-16 column 2). It would have been obvious at the time the invention was made to a person of ordinary skill in the art to have modified Itoh reference to include the teachings of Lo reference because the user can use the image in its running application, as disclosed by Lo (lines 41-65 column 6).

Rothschild teaches (Figs. 9-10, line 53 column 30 to line 54 column 31) a system of requesting data wherein the system polls a local location and the data,

Application/Control Number: 09/943,397

Art Unit: 2194

from a remote location, is being delivered to the system. It would have been obvious at the time the invention was made to a person of ordinary skill in the art to have modified Itoh reference to include the teachings of Rothschild reference because by polling, the system could request data when it becomes available as disclosed by Rothschild (line 53 column 30 to line 54 column 31).

As to claim 22, Itoh as modified further teaches there being no server operatively interposed between the input scanner and the port associated with the destination computer (... an image data signals readout by a scanner device is directly transmitted to a terminal, connected to a network without using a sever device such as a mail server..., lines 25-35 column 3).

As to claim 23, Rothschild further teaches the system not polling the port through which data enters the system (Figs. 9-10, line 53 column 30 to line 54 column 31). Note the discussion of claim 21 above for the reasons of combining references.

As to claim 24, Lo further teaches the selected destination computer activating an image acquisition program in response to detecting incoming image data in the file location (... an application program 104 such as a program which acquires images. The application program may also process the image data which is acquired..., lines 43-45 column 6). Note the discussion of claim 21 above for the reasons of combining references.

As to claim 25, Lo further teaches a daemon within the destination computer conveying image data from the port to the file location (lines 31-62

Page 5

column 19). Note the discussion of claim 21 above for the reasons of combining references.

As to claim 26, Itoh as modified further teaches the input scanner scanning a document including a plurality of page images (image data signal, line 52 column 3).

As to claim 27, Lo further teaches the computer sending a template to the input scanner, the template including a network address of the computer (...the client computer 102 transmits the open session command of FIG. 7A to the scanner server 102 including the client machine name, the client address and port number in step 742..., lines 30-33 column 19). Note the discussion of claim 21 above for the reasons of combining references.

As to claim 28, Lo further teaches in response to receiving a confirmation of receiving the template from the input scanner (the server 130 transmits the open session acknowledge command illustrated in FIG. 7B to the client in step 746), the computer retaining information about the input scanner (using the acknowledge command to make other communications to the scanner server, lines 39-62 column 19). Note the discussion of claim 21 above for the reasons of combining references.

As to claim 29, Lo further teaches the computer retaining information about the input scanner on a list of approved input scanners; and the computer refusing to accept image data from an input scanner not associated with the list of approved input scanners (the client communicates with determined scanner

Application/Control Number: 09/943,397

Art Unit: 2194

servers, 740 Fig. 14A). Note the discussion of claim 21 above for the reasons of combining references.

Response to Arguments

4. Applicant's arguments filed 7/9/2007 have been fully considered but are most in view of the new ground(s) rejection.

Applicant's arguments presented issues which required the Examiner to further view the previous rejection. The Examiner conducted a further search regarding the issues mentioned in Applicant's response. Therefore, all arguments regarding the cited references of the previous rejection are moot in view of the new grounds of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andy Ho whose telephone number is (571) 272-3762. A voice mail service is also available for this number. The examiner can normally be reached on Monday – Friday, 8:30 am – 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Thomson can be reached on (571) 272-3718.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIM) system. Status information

Art Unit: 2194

for published applications may be obtained from either Private PAIR or' Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-2100.

Any response to this action should be mailed to:
